INTRODUCTION

Voltamics Group was established in 1952 with one industrial zone producing Watches.

In 1995 Voltamics industrial base had been expanded to include 10 factories occupying an area of 230,000 m² and covering a large scope of business varying from Office, Educational, & Electronics materials to Automotive Supplies. The factories and commercial offices of Voltamics employ 3000 professional engineers, technicians, skilled workers, marketing, sales and management members.

Voltamics is a professionally managed Industrial and trading Group with its headquarters in the city of Millen in Italy. Voltamics is one of the top companies in Italy with core businesses. Owning a large manufacturing base, professional staff and long experience in project management and project execution. These qualifications were the reason that Voltamics was the best choice to manage and implement Big turn key projects.

Voltamics manufacturing and trading activities are carried out by several legal companies, for various business reasons. Voltamics implemented a local System, they worked on this system for about 10 years. However, keeping in view the future challenges and growth plans, Voltamics is implementing SAP ERP.

VOLTAMIC WATCHES

Introducing Voltamic, a luxury watch made out of quality wood. Voltamic is designed in Italy from our designer experts who spend hours designing a premium product for our customers. Voltamic Men's Premium Watch is made out of good quality and resistant wood. The design is a classic design made in Italy from our expert designers. Time is valuable and we need to manage it so our designers took a lot of time to make an easy to use watch but at the same time good looking and with the best materials in the market.

SCOPE OF THE CURRENT ENGAGEMENT

SAP has been engaged to implement the following modules of SAP ERP at VOLTAMICS

- Financial Accounting
- Controlling
- Sales & Distribution
- Customer Service
- Materials Management
- Production Planning
- Plant Maintenance
- Project Systems
- Quality Management
- Human resource

SCOPE OF THIS DOCUMENT

In the Business Blueprint of the assignment, study of the as-is processes has been carried out by SAP consultants and the proposed to-be solution has been formulated in consensus with the Business Process Owners and the Core Team of Voltamics. This document is the confirmation of the Enterprise Structure, Master Data, Business Processes and Information requirements to be set up in SAP in relation to each Module.

OBJECTIVE OF THIS REPORT

SAP Consultants will demonstrate reports, business processes on test or demo data to ensure that Voltamics users find it easier to relate to the same.

Based on the discussions, various business scenarios will be documented that need to be addressed by the configured my SAP ERP system. The purpose of this report is to confirm the understanding of these business scenarios, which will form the basis for system specifications. This document covers only an overview of the to-be processes. The exact data on master data fields, their status, document types, number ranges used in individual transactions shall be determined during the Realization phase.

BUSINESS PROCESS SCOPE

The Financial Accounting (FI) module will cover the following business processes:

- Master Data Maintenance in Accounting
- General Ledger Accounting
- Accounts Payable
- Accounts Receivable
- Asset Accounting
- Closing Procedures
- Management Information System in FI

Define Account Group

Definition:

Account Group in SAP FICO is used to classify different types of accounts in the SAP system. It helps in organizing master data such as customer accounts, vendor accounts, and general ledger accounts. Account groups also control the number range assigned to accounts and determine which fields are mandatory or optional during account creation. This helps maintain consistency and proper management of financial records.

DEFINE DOCUMENT TYPES & NUMBER RANGES

Calculation Procedure

Definition:

Calculation procedure defines the method used in SAP to determine how taxes are calculated. It specifies the sequence of tax conditions and the rules used to calculate the tax amount. Each step in the procedure determines how the tax value is derived. This helps ensure accurate tax calculation during transactions.

output:

Control – Tax Procedure Configuration

Definition:

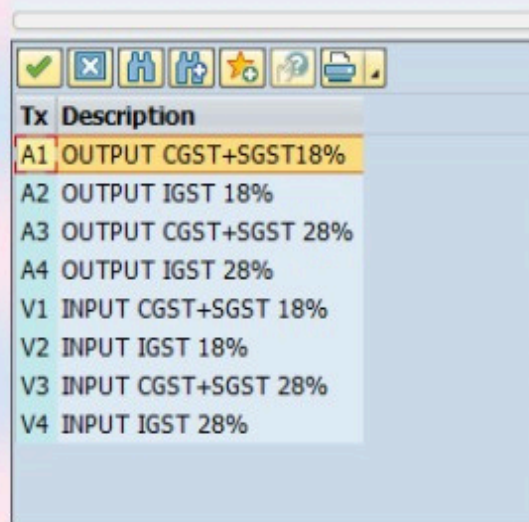

Control in SAP FICO refers to the configuration used to manage the tax calculation process within a tax procedure. It defines the sequence of steps, base amount, and tax condition types used to calculate taxes such as CGST, SGST, and IGST. Each step in the control determines how the tax value is calculated and posted to the respective accounts. This configuration ensures accurate tax calculation and proper financial postings during transactions.

NOTE: -

The **Voltamics Group of CMR** Used calculation procedure is **PK07TX**.
And assign this calculation procedure to India.

Reference data

Ref. Dunning Procedure for Texts: CRM8 dunning procedure for crm8

Dunning Definition:

Dunning is a process used in SAP to manage overdue customer payments. The system automatically sends reminders or notices to customers who have not paid their invoices on time. It helps track outstanding receivables and encourages timely payment. This improves the company's cash flow and financial management.

NOTE:

1. You have to define all the configurations as per the requirement of transactions given in 'Voltamics Group Of CMR' and define above configurations as such.
2. Transaction data are available on part 3.
3. Create general ledger as per the requirement of transaction data.
4. Tax configurations are predefined. You can choose the tax codes are already available only if tax calculation procedure (PK07TX) assigned in country.
